

A PRV Can Save You Money!

Dear Neighbor,

San Antonio's growth has resulted in SAWS increasing water delivery pressure to pump water to farther and higher elevations. Have you been experiencing any of the following?

- Increase or fluctuation in water pressure?
- Unusual noises in pipes when running water or flushing toilets?
- Drippy faucets or toilets continuing to run after flushing?
- Unexplained leaks in your slab foundation or in the walls?
- Frequent breaks in your water or sprinkler system?

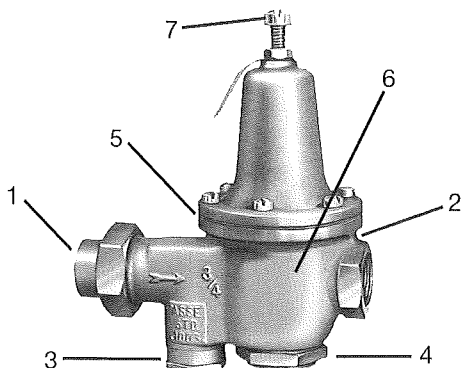

If you answered "yes" to any of these, it could be a result of your water pressure running above recommended guidelines. The result can range from costly to disastrous – anything from fixtures and appliances developing leaks and wearing out before they should to a catastrophic break that floods your home.

We at Shafer Services have helped eliminate this risk for many of our customers. The addition or replacement of a pressure-regulating valve (PRV) can save you and your family from unneeded expenses and headaches, (and may keep your insurance costs lower if you don't have water leak claims).

And not all PRVs are created equal. Through years of experience we have found one that fits the needs of our area and works better and lasts longer than most, providing both long term protection and savings. If you are experiencing any of the conditions described above, please call us today at 210-227-8358, or go online to www.shaferservices.com to find out more or make an appointment. We will be glad to check your water pressure to assure that it is within the guidelines required by the local city codes.

Act now for substantial savings on the installation of a PRV by Shafer Services.

3/4" Typical Water Regulator

1. Union Connection
2. Bronze Body
3. Integral Stainless Steel Strainer Screen with Separate Plug
4. Removable Disc Assembly
5. Durable Diaphragm
6. Thermal Expansion By-Pass Check
7. Adjustable Pressure Screw

Don't wait for something to happen before you act. Remember, you're Safer with Shafer.

Best regards,

Jimmy Shafer
